

Micro **PowerPACS**® for Veterinary

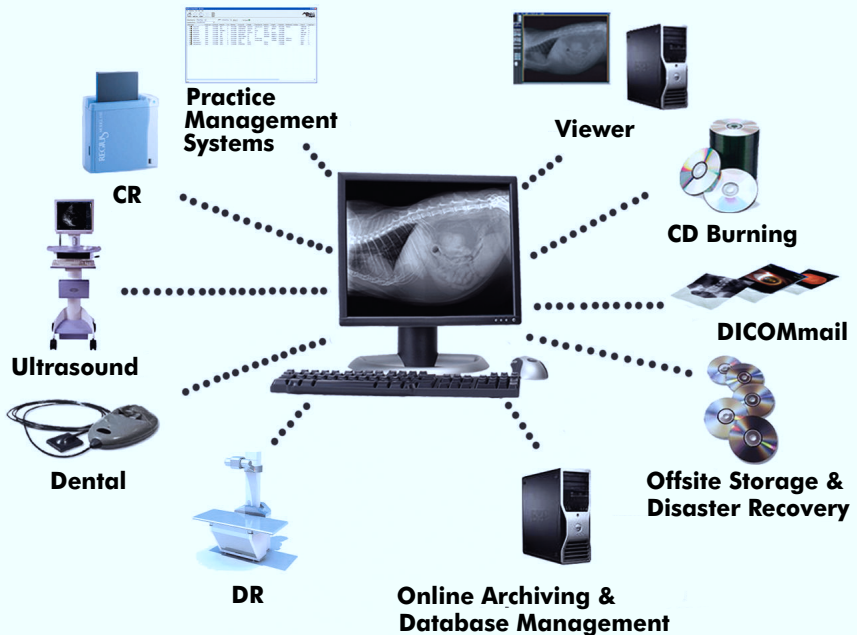

Integrated Digital Turnkey Solution Specifically Designed for the Veterinary Market

The product was created exclusively for the Veterinary Market. No longer is there a need for separate software programs, worklists and computers to meet all of your CR/DR/PACS and dental imaging needs. The complete PowerPACS turnkey solution for Veterinarians does it all!

MPP for Veterinary DICOM Viewer

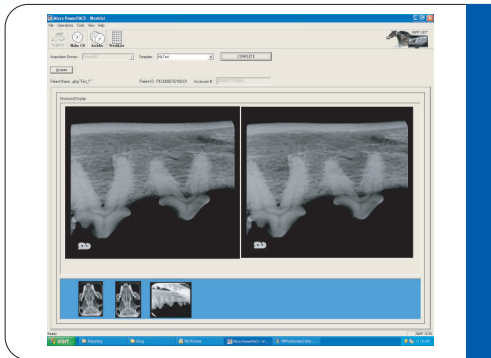

VETinfo SYSTEMS' Micro PowerPACS (MPP) for Veterinary was developed to deliver optimum performance, based upon the needs of veterinary practices. The key advantages of the system are its ease-of-use, simple manageability, and functionality to provide image viewing both locally and remotely. The system's multiple modality capacity for acquiring images makes it easy to switch from one acquisition device to another at the click of a button. The full DICOM system offers an integrated full body/dental imaging product to manipulate and store full body and dental images into one worklist. The Veterinary Digital Turnkey Solution also allows users to utilize the full dental software to create templates for all digital dental images. This proven technology combines major dental modalities, including Schick, All-Pro, Progeny, and AFP in the simplest and most effective solution for every veterinary imaging need.

Veterinary practices now only need one software program to perform CR or DR acquisition, dental acquisition, and PACS manipulation and storage. This turnkey solution eliminates the need for several software packages and databases to acquire images from a multiple of sources, making digital imaging and diagnostic viewing easier than ever before.

Viewing for ultrasound, endoscope, CR, DR, and digital dental modalities is simple with the system's sophisticated DICOM-compliant PACS server that can accept virtually any image from any system and export it in a variety of formats to additional viewing stations, multiple exam rooms, CD or DVD, DICOM send, or remote locations. The fully integrated system also provides the ability to share individual DICOM images with clients and colleagues, at any time and location, via e-mail with our DICOMmail product.

MPP for Veterinary is the first and only premier integrated turnkey solution that can handle all digital full body and dental images, and produce high-resolution, diagnostic quality images for superior evaluation and accurate diagnosis.

Micro **PowerPACS**[®] for Veterinary

MPP for Veterinary Dental Mount Management

About VETinfo SYSTEMS

VETinfo SYSTEMS is a division of RADinfo SYSTEMS, focused solely on the Veterinary and Equine Markets. VETinfo SYSTEMS has developed dynamic digital software solutions to enhance patient care in the veterinary industry, forging the future of how veterinarians will use digital imaging to advance their methods of diagnosis and treatment.

VETinfo SYSTEMS brings a unique outlook to digital imaging, launching a full range of Windows-based, DICOM-compliant software that combines images with associated patient/study data and transmits them to the veterinarian's workstation, improving the delivery of both routine and emergency patient care. VETinfo SYSTEMS offers DICOM solutions that will integrate its products with veterinary practice management systems and multiple modalities, thereby eliminating the need for multiple software programs and databases. These easy to use software systems improve workflow and efficiency, adding value to each customer's practice.

Features:

Complete Acquisition:

- Creates an integrated body/dental imaging product
- CR full-body acquisition
- DR full-body acquisition
- Dental Acquisition
- Combines major dental modalities including Schick, AllPro, Progeny, and AFP
- Patient registration
- Multiple modality capacity makes it easy to switch between acquisition devices
- All images stored under one worklist

Complete Viewing Station:

- Viewing for ultrasound, endoscope, CR, DR, and digital dental modalities
- Ability to view images both locally and remotely
- Comprehensive toolkit, including zoom, window/leveling, panning, measuring and much more
- DICOM send and receive functions
- Additional viewing stations can be added and networking capabilities can be increased, for multiple exam rooms and/or remote locations

Complete PACS System:

- Image storage
- Archiving system
- Disaster recovery
- Easy CD/DVD burning
- DICOMmail to e-mail to a referring doctor, saving the time and money associated with burning images to disks

Full Dental Software:

- Mount tools for dental acquisition
- Preset mount templates included
- Easily create mount templates for every practice need
- Additional image manipulation tools, including pseudo-color and emboss functions
- All images stored in the PACS are managed in one centralized worklist

Additional Benefits:

- One worklist combines multiple modalities
- Time and cost savings for the practice are passed to the customer
- 24/7 technical support from our team of qualified technicians
- Live voice when calling technical support, not automated service
- Assurance that all modalities will communicate within one system
