VETinfo SYSTEMS™ Selects Careray for PACS/DR Solution for the Veterinary Market

VETinfo SYSTEMS' PowerDR Acquisition® manages entire digital imaging solution, powered by Careray imaging technology

DULLES, VA—(PR NEWSWIRE)—October 22, 2016– VETinfo SYSTEMS has selected Careray to provide CsI based direct digital x-ray systems for their latest image management solution for the veterinary market. The concept for this new offering is to provide an all-in-one solution to meet the vet's needs for a CsI DR product. "PowerDR Acquisition®" utilizes cloud and web technologies to enable users to acquire, view, manipulate, store and archive diagnostic-quality images on ONE system. Devised, tested, and perfected for the unique needs of veterinary practices, PowerDR Acquisition® can acquire and display all DICOM compatible images, utilizing VETinfo SYSTEMS' PACS developed exclusively for the veterinary industry.

"Veterinary practices now only need one computer system to perform the DR acquisition and PACS manipulating and archiving functions. No longer will several software packages and databases be needed to acquire images from a variety of sources," states Dr. Chen-Tai Ma, President and CEO of VETinfo SYSTEMS. "That functionality has given us an opportunity to develop a simple but robust solution for the imaging needs of veterinary hospitals and clinics around the world."

Full integration of VETinfo SYSTEMS' web-based PACS and Careray's imaging technology enables users to view and archive DICOM images on a central system, simplifying the query, retrieve and send processes by organizing the data into ONE worklist. PowerDR Acquisition® has open architecture for communication with most Practice Management systems. Rather than using multiple digital image systems, veterinarians need only ONE— PowerDR Acquisition® can acquire, display, and archive all DICOM images. The combination of Careray's CsI DR technology and VETinfo SYSTEMS' dynamic PACS provides the best quality images for veterinarians to use. Featuring a full disaster recovery system, PowerDR Acquisition® provides auto-archiving capabilities with the use of RADinfo cloud based technology. The web-based PowerDR Acquisition® allows users instant access to data from any computer with an Internet connection.

ABOUT VETINFO SYSTEMS

VETinfo SYSTEMS is a division of RADinfo SYSTEMS, focused solely on the Veterinary and Equine Markets. VETinfo SYSTEMS has developed dynamic digital software solutions to enhance patient care in the veterinary industry, forging the future of how veterinarians will use digital imaging to advance their methods of diagnosis and treatment. Digital imaging technology has transformed the veterinary industry, enabling veterinarians and veterinary radiologists to provide faster, more accurate diagnoses than ever before. VETinfo SYSTEMS brings a unique outlook to digital imaging, launching a full range of Windows-based, DICOM-compliant software that combines images with associated patient/study data and transmits them to the veterinarian's workstation, improving the delivery of both routine and emergency patient care. VETinfo SYSTEMS offers DICOM solutions that will integrate its products with veterinary practice management systems and multiple modalities, thereby eliminating the need for multiple software programs and databases. These easy-to-use software systems improve workflow and efficiency, adding value to each customer's practice.
